DETAILED ACTION

1. Claims 1 to 23 are presented for examination.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show item 225, page 12, line 23, as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claim 9 is objected to because of the following informalities: please change "a memory unit" to ---a computer-readable memory unit recited on line 14. The phrase "a memory unit" appears to be referring to a different memory unit.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 9 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9, recites the limitation "accessing said received signal" recited on line 7. There is insufficient antecedent basis for this limitation in the claim. Claim 16 has a similar error. Claims 10-15 and 17 to 22 are also rejected due to their dependency on a rejected base claim.

Allowable Subject Matter

6. Claims 1 to 8 and 23 are allowed.
7. Claims 9 to 22 would be allowable once the 112 second paragraph rejection is overcome.

8. The following is a statement of reasons for the indication of allowable subject matter: the instant invention is directed to a method and a decoding apparatus for decoding a received signal containing data and samples utilizing multiple tables. The prior art made of record teaches a decoder for decoding signals utilizing lookup-tables. For instance, Thomsen et al. (USP 5596589) discloses a method and an apparatus for decoding error correction codes with a plurality of look-up tables, Cho et al. (*A low power variable length decoder for MPEG-2 based on non-uniform fine grain table partitioning*, IEEE) discloses a variable length decoding system utilizing a lookup table and Wai et al. (*Improved decoder for transform coding with application to the JPEG baseline system*, IEEE) discloses a decoder for decoding image coding data utilizing a plurality of lookup tables.

However, the prior art made of record taken alone or in combination fails to teach or fairly suggests or render obvious the novel elements of the instant invention.

Specifically the prior art made of record fails to teach or fairly suggest or render obvious a computerized method for decoding a sequence of binary digits of a received signal comprising: indexing said received table to map said data bit to a corresponding known value; calculating a sum comprising a squared difference between said sample and said known value and selecting a codeword from a memory resident table corresponding to a minimum value of said sum.
